

NOVALOK

ADVANCING INNOVATION

PROTECT | REINFORCE
DURABLE DESIGN

Protect and strengthen your pallet rack posts with our new post protector design.

Strong folds, and bracing from the back create an extra durable combination in our new design.

Post Protector.

To protect new repair work, and to protect existing intact pallet rack posts we recommend the use of post protectors.

The post protector is bolted at the front with two 16mm Excalibur concrete screws. Our new design is self supported at the back further reinforcing against front impacts.

16mm Excalibur Concrete Screws
